DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see amendment, filed November 22, 2005, with respect to the rejection(s) of claim(s) 1-7, 9-13, and 15-17 under 35 U.S.C. 102 and 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Perren [U.S. Patent No. 3,485,262].

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 25 is rejected under 35 U.S.C. 103(a) as being unpatentable over Horten et al [WO 92/20096] as applied to the claims in the previous official action, in view of Perren.

Regarding **claim 25**, Horten discloses a sensor device comprising an electronic sensor for outputting an electric signal in accordance with physical displacement of a sensing portion and a casing in which the electronic sensor is mounted (page 2, lines 1-10 and 30-34 and claims 7 and 8). Horten discloses that the casing may be made of substances such as a plastic or another polymer material and that the electronic sensor is contained within the casing. Horten does not specifically disclose that a resin material is used to form a casing.

Art Unit: 2636

Perren teaches that it was known in the art for resin materials to be used in devices for damping vibrations (column 5, lines 43-49). It would have been obvious to one of ordinary skill in the art at the time of the invention by the applicant to modify the invention of Horten to include a casing made of a resin material because the modification would have resulted in a sensor device capable of provided more accurate results by damping even more high-frequency vibrations in the sensing environment.

Allowable Subject Matter

4. Claims 1-24 and 26 are allowed.
